Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsukada et al in view of Duce et al. Tsukada et al teach the claimed subject matter except for showing the terminal connection structure and use of a heater element to temperature stabilize the sensor. Duce et al is applied for teaching that it is conventional to use connectors and terminals as set forth in figure 3, elements 58, 60 and 62 which include chambers 60, with an enhanced connection attained. In view of this teaching it would have been obvious to modify the Tsukada et al system with terminal means and a heating element as set forth in Duce et al, with the advantage of

Art Unit: 3742

an enhanced connection between the circuit elements attained. Note that leads from the terminal extent to the heating elements in Tsukada et al, as per claims 1 and 2. Use of a wiring harness as per claim 8 is a matter of choice for the artisan, dependent on the number of wires used.

Allowable Subject Matter

Allowable Subject Matter

Claims 22 and 23 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach the claimed combination of the connector structure, heating elements and resistor means set forth in claims 22 and 23.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kojima et al and Weiblen et al are cited for disclosing pertinent heating control systems.
